I attended a Data Science Bootcamp Course from Udemy online and these are the notes of the course.

- Introduction
- Probability
 - Combinatorics
 - Bayesian Inference
 - Distributions
 - Probability in Other Fields
- Statistics
 - Descriptive Statistics
 - Practical Example: Descriptive Statistics
 - Inferential Statistics Fundamentals
 - Inferential Statistics: Confidence Intervals
 - Practical Example: Inferential Statistics
 - Hypothesis Testing
 - Practical Example: Hypothesis Testing
- Introduction to Python
 - Variables and Data Types
 - Basic Python Syntax
 - Other Python Operators
 - Conditional Statements
 - Python Functions
 - Sequences
 - Iterations
 - Advanced Python Tools
- Advanced Statistical Methods in Python
 - Linear regression with StatsModels
 - Multiple Linear Regression with StatsModels
 - Linear Regression with sklearn
 - Practical Example: Linear Regression

- Logistic Regression
 - Cluster Analysis
 - K-Means Clustering
 - Other Types of Clustering
- Mathematics
- Deep Learning
 - Introduction to Neural Networks
 - How to Build a Neural Network from Scratch with NumPy
 - TensorFlow 2 point 0: Introduction
 - Digging Deeper into NNs: Introducing Deep Neural Networks
 - Overfitting
 - Initialization
 - Digging into Gradient Descent and Learning Rate Schedules
 - Preprocessing
 - Classifying on the MNIST Dataset
 - Business Case Example
 - Conclusion
- Case Study
 - Case Study - What is Next in the Course?
 - Case Study - Preprocessing the Absenteeism Data
 - Case Study - Applying Machine Learning to Create the absenteeism Module
 - Case Study - Loading the absenteeism Module
 - Case Study - Analyzing the Predicted Outputs in Tableau
- Appendix
 - Deep Learning - TensorFlow 1: Introduction
 - Deep Learning - TensorFlow 1: Classifying on the MNIST Dataset
 - Deep Learning - TensorFlow 1: Business Case
 - Software Integration

1 Introduction

Please find the Big picture of Data science here in :

Some important things to keep in mind:

- **Analytics vs Analysis** Term Analytics relates to the future events. It includes exploring of patterns and prediction. Term analysis relates to the data from past events(existing data). It explains how and when.
- **Business intelligence** Process of analysing and reporting historical business data. Aims to explain past events using business data.
- **Machine learning** The ability of machines to predict outcomes without being explicitly programmed. Creating and implementing algorithms that let machines receive data and use this data to: 1. Make predictions, 2. Analyse Patterns, 3. Give recommendations.
- **Business intelligence** Simulating human knowledge and decision making with computers.

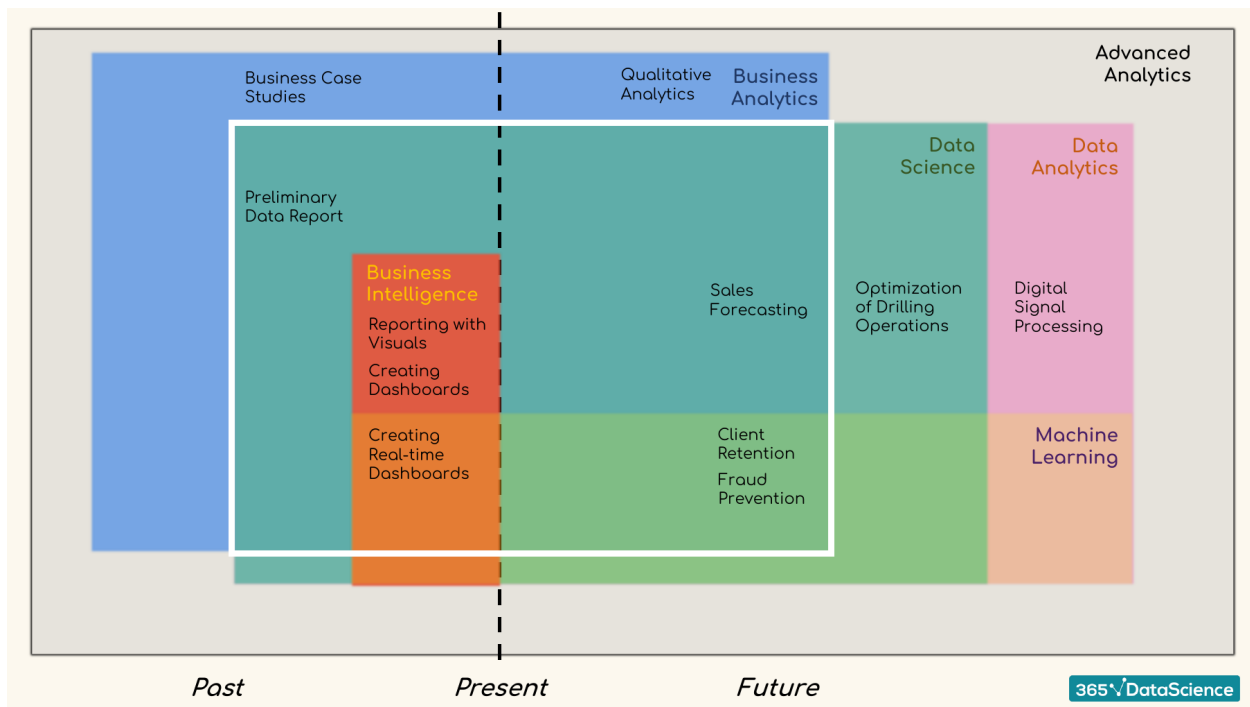

Figure 1: Big picture of the data science term definitions

2 Probability

2.1 Combinatorics

Permutations (Arrange)(Used for arrangement of objects & order is relevant): Arrange entire set of elements in the sample space. Variations (Pick and arrange) (Used for arrangement of objects & order is relevant): Arrange only a few elements from the set of elements in the sample space. Combination (Pick)(order is irrelevant)

No repetition

Repetition

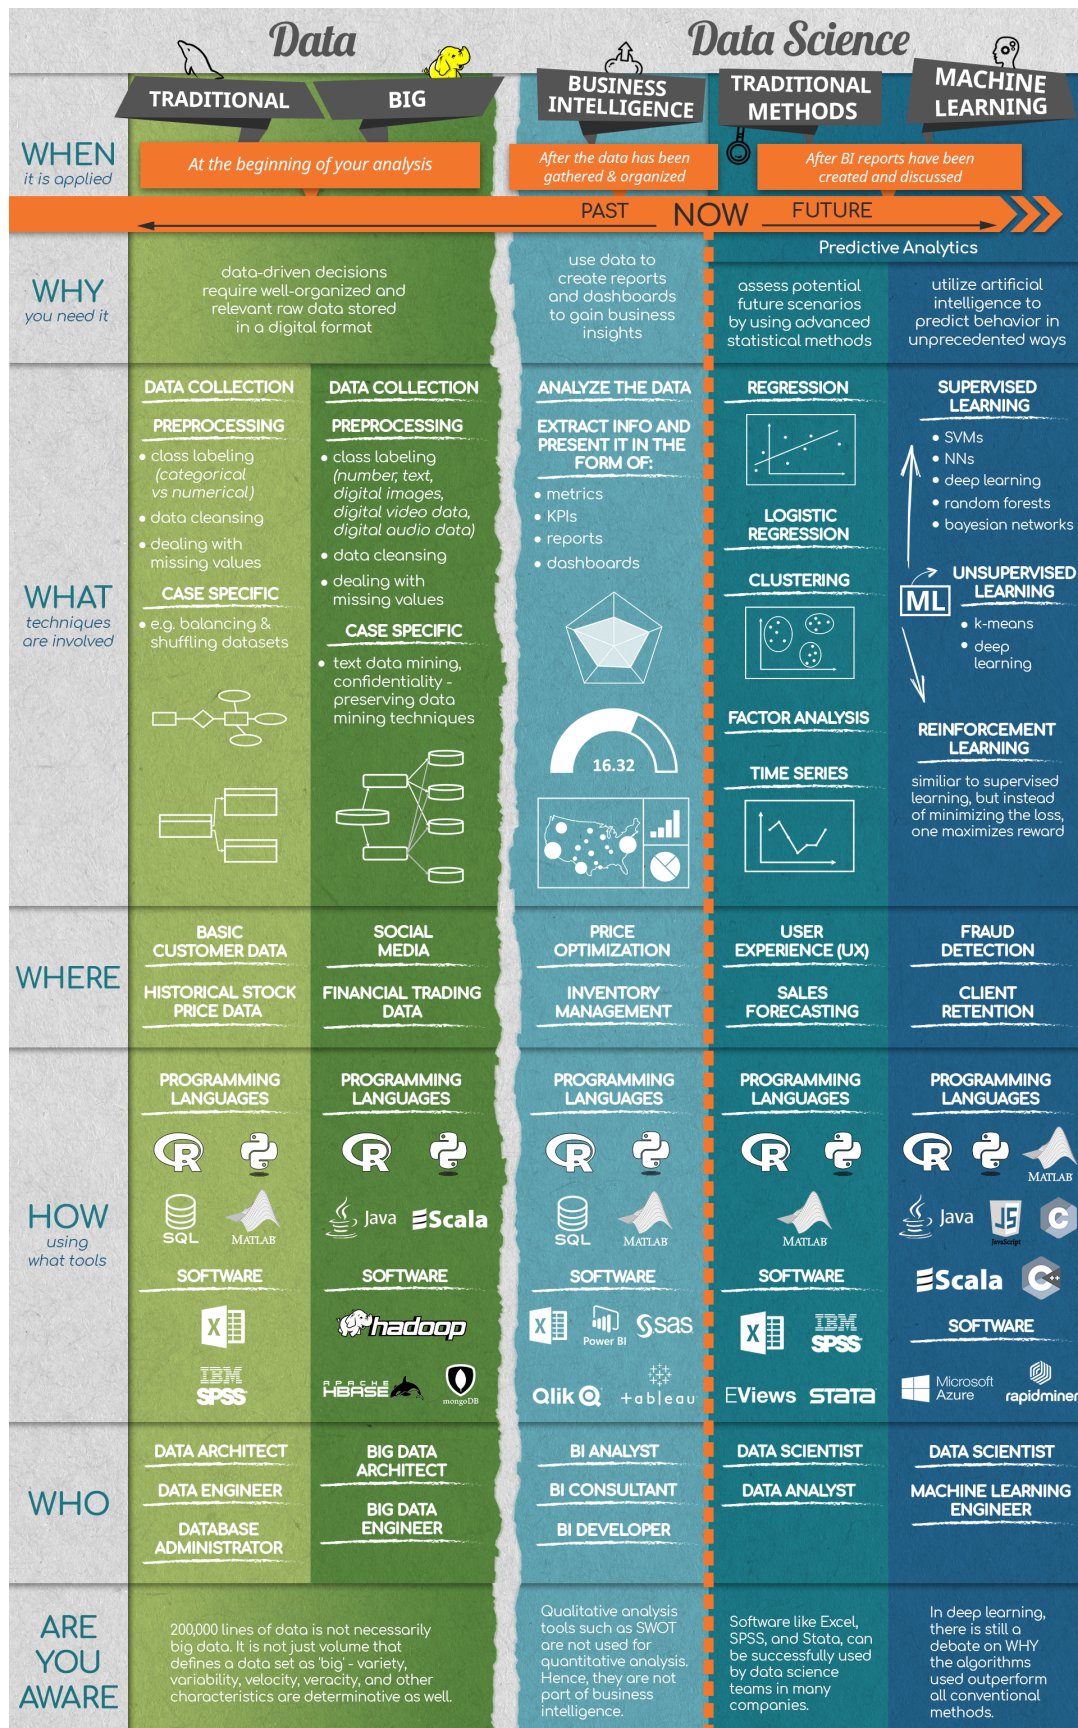

Figure 2: Overview of Course

2.2 Bayesian Inference

2.3 Distributions

2.4 Probability in Other Fields

3 Statistics

3.1 Descriptive Statistics

3.2 Practical Example: Descriptive Statistics

3.3 Inferential Statistics Fundamentals

3.4 Inferential Statistics: Confidence Intervals

3.5 Practical Example: Inferential Statistics

3.6 Hypothesis Testing

3.7 Practical Example: Hypothesis Testing

4 Introduction to Python

4.1 Variables and Data Types

4.2 Basic Python Syntax

4.3 Other Python Operators

4.4 Conditional Statements

4.5 Python Functions

4.6 Sequences

4.7 Iterations

4.8 Advanced Python Tools

5 Advanced Statistical Methods in Python

5.1 Linear regression with StatsModels

5.2 Multiple Linear Regression with StatsModels

5.3 Linear Regression with sklearn

5.4 Practical Example: Linear Regression

5.5 Logistic Regression

5.6 Cluster Analysis

5.7 K-Means Clustering

5.8 Other Types of Clustering

6 Mathematics

7 Deep Learning

7.1 Introduction to Neural Networks

7.2 How to Build a Neural Network from Scratch with NumPy
